There is a date field in the table that has a day of week value that defaults to "1". How do I get that value from the attribute table of that table? I would like to use it to calculate the percentage of the population for each day of the week. A: There is a post on the community-blog about exactly that here: and at the end of that post (slide 26), there is a link to the wiki that shows how to do this using python. The values are stored in the field's style. You can therefore just add a new column to your field with the "Calculate Field" tool, then set its expression as follows: "If (day(fld_date)=1, 0.01, 0)" If the initial values of the field have been changed, the value of the field won't be updated.
